

Diplomat™ Utilities

Diplomat Utilities are powerful tools for quality control and verification of seismic and navigation data.

Diplomat Utilities comprise the following modules:

SEGYCHK	To verify the contents and produce an index of a tape or disk file in SEGY format.
SEGDCHK	To verify the contents and produce an index of a tape or disk file in SEG D format.
YVU	Onscreen plotting of selected records and/or traces (e.g. near trace plot) for SEGY and SEG D data. Plots can be saved as TIFF or BMP files for subsequent viewing or producing hard copy displays.
MAPLOT	Onscreen plotting of lines and shots or time slices from navigation coordinates
UKLIST	Navigation data utility program – lists, selects areas and converts UKOOA and SEGP formats
SEGYSPPLIT	Prepares SEGY data for writing in unencapsulated form to CD, DVD or disk
SEGDBIN	Prepares SEG D data for writing in unencapsulated form to CD, DVD or disk
SGYREPORT	Creates a report on 3D data, time-slice and amplitude QC information
SGYSELECT	Selects traces if inside a polygon or if within a specified number range
SEGYCONC	Concatenates SEGY files

System Requirements:

- Intel compatible Pentium Workstation (including 64-bit systems)
- Windows 7 / Vista
